

TECHNICAL DOCUMENTATION

TABASCO LEGAL
MANAGEMENT SYSTEM

Module-wise Architecture & Functional Breakdown

Version:	1.0
Last Updated:	May 26, 2026
Client Name:	TABASCO TECH CONT LLC (UAE)
Development Partner:	ARABINFOTEC
Database Engine:	MySQL (via PDO abstraction layer)
PDF Utility:	mPDF v8.2 + FPDF

1. System Module Architecture

The Tabasco Legal Management System is constructed using a robust custom MVC (Model-View-Controller) inspired directory layout. Each core functionality is structured as a standalone module inside the `modules/` directory, grouping controller files, AJAX hooks, and template files. All business operations leverage custom PHP wrapper classes extending or utilizing the database connector (`Dbcon`) to perform secure, sanitized, and audited transactions.

This document outlines the purpose, files, database tables, and key method specifications for each of the core modules.

2. Core Module Specifications

2.1 Dashboard Module

Controller & Templates: modules/dashboard/panel.php → tpl/panel.tpl.php

The Dashboard serves as the central administrative panel for logged-in internal users. It dynamically aggregates active workflow data and filters visual outputs based on user credentials.

Key Features:

- Displays real-time case notifications retrieved via `Casenotification::get_notifications()`.
- Displays personalized task reminders loaded via `LegalTask_reminders::get_taskReminders()`.
- Applies strict data authorization filters to match the user's logged-in type.
- Automatically redirects external Agency / Third-Party logins to `dashboard/agencies.html` to prevent unauthorized backend navigation.

2.2 Client Management

Source Folder: modules/client/

Business Logic Class: Clients (lib/class/class.legal_client.php)

Primary Database Table: legal_client

Responsible for managing client registration, uploading critical collateral (like visiting cards), and performing real-time outstanding balance calculation.

Key Features:

- Automated client code formatting: `TABL/CL/` prefix appended with a zero-padded incremental sequence.
- Collateral upload management supporting JPG, PNG, and PDF file formats under a strict 1MB size threshold.
- Financial balance tracking split into total outstanding, outstanding supported by cheques, and invoice-only outstanding.
- Soft deletes to safeguard relational database integrity; status is toggled to 'D', executing a cascading disable command across connected documents and contact cards.
- Activity logs recorded automatically for any manual edits made to outstanding totals.

Key Methods:

Method Signature	Functionality / Purpose
<code>Manage_Client_information(\$data, \$id)</code>	Performs either INSERT (if \$id is empty) or UPDATE queries on client information datasets.
<code>Get_Client_Information(\$filters)</code>	Fetches filtered, paginated lists of client profiles matching search terms.
<code>Get_Client_TOTAL_COUNT(\$filters)</code>	Returns total matching rows count, supporting backend pagination algorithms.
<code>Get_Last_Client_ID()</code>	Calculates the highest existing key to resolve the next sequential code.
<code>Update_Client_Records_Status(\$id)</code>	Toggles status value to 'D' for soft-deleting client profiles and their dependencies.
<code>Update_Cheque_OutStanding(\$id, \$data)</code>	Updates financial columns (outstanding, cheque outstanding) with balance calculations.

2.3 Active Legal Management

Source Folder: modules/activelegal/

Business Logic Class: ActiveLegal (lib/class/class.legal_active_legals.php)

Primary Database Table: legal_activelegal

An Active Legal record is the master legal file representing an open case profile. It links a specific client to an assigned external or internal agency and serves as the container for outstanding collections, claims, and expenses.

Key Features:

- Automated code schema: **TABL/AL/** prefix with sequential increments.
- Financial tracking encompassing claim amounts, collected amounts, balance claims, and accrued legal expenses.
- Dynamic status tracking documenting reasons for status changes.
- Agency shifting history tracking that captures transfer records when a file shifts between legal firms or debt collectors.
- Commission matrix setup mapping distinct percentages per agency profile per legal file.

Key Methods:

Method Signature	Functionality / Purpose
Manage_ActiveLegal(\$data, \$id)	Saves or edits the primary active legal records.
Get_ActiveLegal_Information(\$filters)	Performs complex JOIN queries combining client, agency, and case details.
shift_active_legal(\$data, \$id)	Logs transfer history when shifting the file to a different agency.
save_commission(\$data, \$id)	Persists the agency commission percentages for collection payout calculations.
disable_active_legal(\$data, \$id)	Triggers a soft delete of the active legal profile, logging the action.

Agency Categories Mapping:

Category ID	Category Code	Description
1	TP	Third Party Agencies
2	LF	Legal Firms / Lawyers
3	DC	Debt Collectors
4	LT	Internal Legal Team (Default)

2.4 Case Management

Source Folder:

modules/case/

Business Logic Class:

LegalCase (lib/class/class.legal_case.php)

Database Tables:

legal_case, legal_case_roots, legal_case_root_actions, legal_case_hearing, legal_case_relations, legal_case_to_case_relations

Handles judicial case records connected to an Active Legal. It tracks court parameters, assigns lawyers, schedules hearings, implements multi-stage "roots" action logging, and supports bidirectional case-to-case linking.

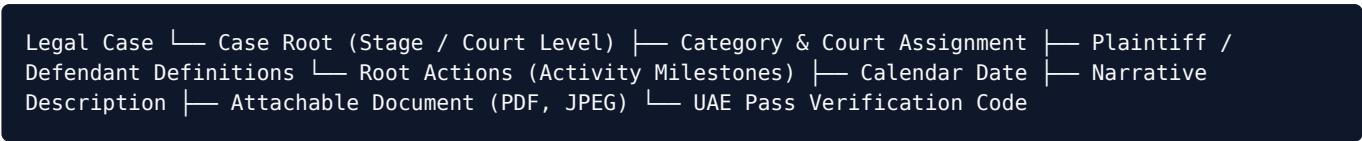

Key Features:

- Comprehensive case detail capture: case numbers, court branches, plaintiffs, defendants, lawyer assignments, and court modes.
- Scheduled court hearing logs tracking feedback summaries and next session dates.
- Case roots system mapping nested operational stages (e.g. appeal phases) with precise description details, document uploading, and UAE Pass reference tracking.
- Bidirectional case linking facilitating related case associations.

Key Methods:

Method Signature	Functionality / Purpose
saveCase(\$data, \$id)	Performs database saving or modifications on standard case metadata.
get_case(\$id, \$active_legal_id, \$case_no)	Fetches details with aggregated subqueries resolving the latest hearing dates.
saveRoots(\$data, \$id)	Saves case root records corresponding to active phases.
all_get_roots(\$filters)	Queries list of roots alongside associated actions, categories, and courts.
syncCaseRelations(\$case_id, \$related_ids)	Synchronizes bidirectional links across multiple case entities.

Case Roots Structure Hierarchy:

2.5 Collection Management

Source Folder: modules/collection/

Business Logic Class: Collection (lib/class/class.legal_collection.php)

Primary Database Table: legal_collections

Records collections and payment inflows recovered from active cases. Every record maps client, case, active legal, and agency identifiers to run downstream commission reports.

Key Features:

- Financial fields track: collection amount, payment date, fee types, payment references, and attachments.
- Aggregated calculation structures verifying total collections per case or active legal.
- Marketing personnel mapping for internal referral tracking.

Key Methods:

Method Signature	Functionality / Purpose
save_collection(\$data, \$id)	Saves or updates collection entries, recalculating related outstanding balances.
getting_collection(\$id, \$case_id)	Returns a simple array of collections corresponding to a case.
total_collection(\$al_id, \$case_id)	Executes SUM queries to return overall collected values.

2.6 Expense Management

Business Logic Class: Expense (lib/class/class.legal_expense.php)

Primary Database Table: legal_expense

Tracks client and case-level financial outlays. Serves as a direct mirror to the Collection Management architecture.

Key Methods:

Method Signature	Functionality / Purpose
save_expense(\$data, \$id)	Performs insertion or updates to expense records.
total_expense(\$al_id, \$case_id)	Returns the aggregated sum of expenses registered to the legal file.

2.7 Commission Management

Business Logic Class: LegalCollectionCommission
(lib/class/class.legal_collection_commission.php)
Primary Database Table: legal_collection_commission

Translates collection logs into financial commissions for third-party agencies, legal firms, or debt collectors based on pre-defined commission templates.

Key Features:

- Automatic commission calculations triggering upon collection recording.
- Formulas compute payable commission based on collected amounts: $\text{Payable} = (\text{Amount} * \text{Commission \%}) / 100$.
- Supports custom zero-commission exemptions.

2.8 Commission Report & Voucher

Source Folder: modules/commissionreport/

Business Logic Class: LegalCommissionVoucher (lib/class/class.legal_commission_voucher.php)

Primary Database Table: legal_commission_voucher

Processes calculated commissions to generate official payment vouchers, renders voucher documents as PDFs, and updates transaction states.

Key Features:

- Builds structured commission lists to run bulk printing operations.
- Uses mPDF to compile voucher layouts into PDFs saved directly to the server.
- Maintains state logic for vouchers (toggling from 'Printed' to 'Paid').

Key Methods:

Method Signature	Functionality / Purpose
createVoucher(\$data)	Inserts a commission voucher record, generating a tracking number.
get_all_vouchers()	Queries vouchers showing printed or paid statuses and positive values.

2.9 Document Management

Business Logic Class: processDocument (lib/class/class.legal_document.php)

Database Tables: legal_document, legal_document_type

Operates as the centralized electronic filing system, mapping uploaded files to their respective parent modules (clients, active legals, case roots, etc.).

Key Features:

- Attaches uploaded files to specific entities via parent codes ('C' for Client, 'AL' for Active Legal, etc.).
- Validates file types, enforces size limits, and sanitizes filenames.
- Supports soft deletes to maintain historical data tracking.

2.10 Reports Module

Source Folder: modules/reports/

Compiles multi-dimensional operational metrics. Includes data tables and export parameters for business intelligence.

Report Type	System URL Mapping	Description
Bad Debts Report	reports/bad_debts.html	Tracks outstanding client files flagged as bad debt.
Closed Legal Report	reports/closed_legal_report.html	Displays closed, archived, and resolved case records.
Total Legal Statement	reports/total_legal_report.html	Aggregates active case timelines and financial stats.

2.11 Tasks & Reminders

Business Logic Class: LegalTask_reminders (lib/class/class.legal_task_reminders.php)

Primary Database Table: legal_task_reminders

Powers calendar tasks and reminders, integrating directly with dashboard displays.

Key Features:

- Assigns items to specific internal users.
- Filters visibility based on user roles and status values.
- Tracks "viewed" status parameters for alert monitoring.

2.12 Master Data

Source Folder: modules/master/

Maintains system-wide lookup tables for dropdown menus, configuration records, and system-wide attributes.

Master Entity	Business Class	Database Table	Manage Page URL
Area / Region	LegalArea	legal_area	master/area.html
Bank Details	LegalBank	legal_bank	master/bank.html
Court Master	LegalCourt	legal_court	master/court.html
Case Categories	LegalCategory	legal_category	master/category.html
Location Lookup	LegalLocation	legal_location	master/location.html

2.13 User & Permission Management

Business Logic Class: UsersClass (lib/class/class.legal_users.php)

Database Tables: users, usertype

Governs authentication, role management, and page-level permission mapping.

Key Features:

- Protects registration endpoints against duplicate logins or email credentials.
- Uses permissions mapping to define View, Add, Edit, Delete, Print, and Mail access per user.
- Enforces `user_module = 'TL'` (Tabasco Legal) filter options.

2.14 Third-Party / Agency Management

Coordinates external workflows, allowing external entities (lawyers, firms, debt collectors) to log into restricted dashboard interfaces and update assigned files.

Agency Type	Business Class	Database Table	Code Prefix
Third Party Agencies	LegalThirdParty	legal_third_party	TABL/TP/
External Legal Firms	LegalFirm	legal_firm	TABL/LF/
Debt Collectors	LegalDebtCollector	legal_debt_collector	TABL/DC/
